Abstract: As a flexible type of energy transmission carrier, mobile energy storages usually are studied with a fixed driving speed, resulting in unsatisfactory system operation results. To address the problem, an optimal scheduling strategy of mobile energy storage capable of variable-speed energy transmission is proposed.

Development directions in mobile energy storage technologies are envisioned. Carbon neutrality calls for renewable energies, and the efficient use of renewable energies requires energy storage mediums that enable the storage of excess energy and reuse after spatiotemporal reallocation.
