

In 1969, Ferrier originally introduced the superconducting magnetic energy storage system as a source of energy to accommodate the diurnal variations of power demands. [15] 1977: Borehole thermal energy storage: In 1977, a 42 borehole thermal energy storage was constructed in Sigtuna, Sweden. [16] 1978: Compressed air energy storage

A hybrid compressed air energy storage system is provided . A heat exchanger 114 extracts thermal energy from a compressed air to generate a cooled compressed air stored in an air ...

Have you initiated contacts or technological transfer agreements? The WIPO GREEN database is a free, solutions oriented, global innovation catalogue that connects needs for solving environmental or climate change problems with tangible solutions.

@article{osti\_863939, title = {Compressed air energy storage system}, author = {Ahrens, Frederick W and Kartsounes, George T}, abstractNote = {An internal combustion reciprocating engine is operable as a compressor during slack demand periods utilizing excess power from a power grid to charge air into an air storage reservoir and as an expander during peak demand ...

In recent years, liquid air energy storage (LAES) has gained prominence as an alternative to existing large-scale electrical energy storage solutions such as compressed air (CAES) and pumped hydro ...

This present disclosure relates generally to energy storage and generation, and, more particularly, to liquid air energy storage (LAES) systems with significantly increased efficiency and...

The increasing penetration of renewable energies such as solar energy and wind power is an important way forward to carbon neutrality around the world [[1], [2], [3]].The fluctuation and intermittence of renewable energies have posed great challenges to the efficient and steady operation of power systems [4] view of these problems, large-scale energy ...

air energy storage (CAES) system includes the step of providing rotational power to a reversible compressor-turbine unit during a compression stage of operation, with the rota

Compressed Air Energy Storage (CAES) systems have been proposed as a large-scale solution to the energy storage problem, and units have been deployed to the grid. ... Case 3 presented a higher heat transfer rate between air and rock material compared to Case 1 due to the higher air temperature, resulting in lower air density and higher flow ...

Groningen-based Corre Energy has signed an agreement with Dutch energy supplier Eneco for offtake, co-development, and co-investment of a compressed air energy storage project in Ahaus, Germany ...

1.2.2 The transferee will own the said patents legally since the transfer application was made to the Patent Office. The transferee has the right, including, but not limited to, the rights to implement, utilize, use and license such technologies for production, manufacture, sales, offer to sell and commercialization, as well as subsequent research and development, ...

Energy system decarbonisation pathways rely, to a considerable extent, on electricity storage to mitigate the volatility of renewables and ensure high levels of flexibility to future power grids.

This invention relates to a Compressed Air Energy Storage (CAES) system and, more particularly, to an adiabatic CAES system that provides improved performance of renewable energy sources by operating a CAES plant with generally zero emissions and without burning any fuel.

Liquid air energy storage (LAES) uses air as both the storage medium and working fluid, it falls into the broad category of thermo-mechanical energy storage technologies.

a proposed LAES system may comprise in combination: a compressor unit consuming off-peak power and providing compression of charging air up to pressure above a critical pressure, a hot thermal energy storage unit adapted to capture, storing and recovery of compression heat for superheating and reheating a discharged air, regenerable adsorber unit providing physical ...

Furthermore, the energy storage mechanism of these two technologies heavily relies on the area's topography [10] compared to alternative energy storage technologies, LAES offers numerous notable benefits, including freedom from geographical and environmental constraints, a high energy storage density, and a quick response time [11]. To be more precise, during off-peak ...

16 The Federal Circuit held that Lone Star did not receive all substantial rights because the original patent owner retained rights to practice, to control enforcement, and to control alienation of the transferred patents. The Diamond Coating decision addressed a patent transfer agreement with similar provisions. Diamond Coating Techs., LLC v. Hyundai Motor ...

This study focusses on the energy efficiency of compressed air storage tanks (CASTs), which are used as small-scale compressed air energy storage (CAES) and renewable energy sources (RES). The objectives of this study are to develop a mathematical model of the CAST system and its original numerical solutions using experimental parameters that consider ...

Liquid air energy storage (LAES) refers to a technology that uses liquefied air or nitrogen as a storage medium. ... This leads to the loss of a large portion of exergy in the heat transfer processes due to temperature glide mismatch between the heat source and the working fluid--the so-called pinch limitation ... US Patent (2009) Google ...

1. WO2023228938 - COMPRESSED AIR ENERGY STORAGE METHOD. [Problem] To provide an economical compressed air energy storage (CAES) method for effectively utilizing the volume space of an air storage unit in order to reduce equipment cost in CAES equipment. [Solution] An air storage unit 300 is formed by a plurality of containers 301, ...

A compressor for compressed air energy storage and regeneration thereof can include a housing, an actuator, and a heat exchanger. The housing can define a volume. The actuator can be operable to expand the volume and compress the volume.

As one of the potential technologies potentially achieving zero emissions target, compressed air powered propulsion systems for transport application have attracted increasing research focuses [1]. Alternatively, the compressed air energy unit can be integrated with conventional Internal Combustion Engine (ICE) forming a hybrid system [2, 3]. The hybrid ...

Compressed air energy storage system is a promising solution in the energy storage field: it is characterized by a high reliability, low environmental impact and a remarkable energy density. ... Four patents related to storage system based on liquid piston and scroll compressor ... Mass transfer between the air and the injected water during ...

West Lebanon, N.H., January 25, 2011 -- SustainX, Inc., a New Hampshire-based startup that is developing a transformational technology for utility-scale energy storage using compressed air, has received its third patent.

A compressed air energy storage (CAES) system is provided. The CAES system comprises one or more compressed air reservoirs, a compressor system configured to compress air into the one or more air reservoirs, and a turbine system configured to generate power using air released from the one or more compressed air reservoirs.

Compressed air energy storage (CAES) is an effective solution for balancing this mismatch and therefore is suitable for use in future electrical systems to achieve a high penetration of renewable energy generation.

Compressed air energy storage systems (CAES) have demonstrated the potential for the energy storage of power plants. One of the key factors to improve the efficiency of CAES is the efficient ...

Compressed air energy storage (CAES) is one of the important means to solve the instability of power generation in renewable energy systems. To further improve the output power of the CAES system and the stability of the double-chamber liquid piston expansion module (LPEM) a new CAES coupled with liquid piston energy storage and release (LPSR-CAES) is proposed.
