

The air-gap eccentricity of motor rotor is a common fault of flywheel energy storage devices. Consequently, this paper takes a high-power energy storage flywheel rotor system as the research object, aiming to thoroughly study the flywheel rotor's dynamic response characteristics when the induction motor rotor has initial static eccentricity. Firstly, the formula ...

The entropy production theory in thermodynamics is applied to the analysis of hydraulic machinery, and the entropy production theoretical model is gradually improved [18, 19]. Based on the existing theoretical model of entropy production, scholars analyze the hydro-mechanical flow field characteristics in combination with energy loss [[20], [21 ...

After comprehensive evaluation, the evolution trend of energy storage efficiency (η TES) is 13.15 %, -7.84 %, 81.74 %, 72.69 %, 46.76 %, and 74.73 %, respectively. Therefore, the coupled effect of magnetic field and ultrasonic field affect heat transfer and energy storage performance, but reduce energy storage efficiency (η TES). Therefore ...

Organic materials have gained significant attention in the battery energy storage field due to their good reaction kinetics and designable properties. However, conventional organic materials typically exhibit poor cycling stability in dual-ion batteries because of their high solubility and low electron conductivity.

Rapidly scaling up of energy storage systems is crucial in addressing the intermittency of renewable energy generation over extended periods of time, particularly as the share of wind and solar power generation rapidly increases towards the goal of achieving net zero carbon emissions by 2050 [1, 2]. Meeting the continuously increasing flexibility requirements of ...
