The stones were dated to the Old Kingdom of Egypt, which ruled the Nile Valley from 4,706 to 4,201 years ago. They were etched on both sides with shallow grooves containing traces of copper. Similar, smaller pieces of obsidian with intact inlaid copper had been found in the past, but were believed to be jewellery - a type of Ancient Egyptian bling.

The TES systems, which store energy by cooling, melting, vaporizing or condensing a substance (which, in turn, can be stored, depending on its operating temperature range, at high or at low temperatures in an insulated repository) [] can store heat energy of three different ways. Based on the way TES systems store heat

energy, TES can be classified into ...

Firstly, this paper examines the energy sensitivity of various battery production and manufacturing processes, and investigates the electric energy sensitivity during battery production phases. Secondly, analyses were conducted separately for nickel sulfate and cobalt sulfate, which are significant contributors to NCM batteries.
