The V2G process is regarded as promising but not absolutely essential. However, it could transform the energy industry in the future. No one has yet explained how a power grid that can no longer rely on nuclear or coal-fired power stations will be able to maintain its stability when millions of additional electricity consumers appear on roads all over the world.

During this period, the vehicle energy storage device must have sufficient electricity to supply the auxiliary power supply system on board, so the SOC lower limit is set at 0.4. Remark 2 In Fig. 9, the train operating conditions mainly include the traction condition, cruise condition, coast condition and braking condition, all running at ...
