What is Compressed Air Energy Storage (CAES)? Compressed Air Energy Storage is a technology that stores energy by using electricity to compress air and store it in large underground caverns or tanks. When energy is needed, the compressed air is released, expanded, and heated to drive a turbine, which generates electricity.

The heat from solar energy can be stored by sensible energy storage materials (i.e., thermal oil) [87] and thermochemical energy storage materials (i.e.,  $\text{CO}_3\text{O}_4/\text{CoO}$ ) [88] for heating the inlet air of turbines during the discharging cycle of LAES, while the heat from solar energy was directly utilized for heating air in the work of [89].
