In the past few decades, electricity production depended on fossil fuels due to their reliability and efficiency [1]. Fossil fuels have many effects on the environment and directly affect the economy as their prices increase continuously due to their consumption which is assumed to double in 2050 and three times by 2100 [6] g. 1 shows the current global ...

Energy storage in dielectrics is realized via dielectric polarization P in an external electric field E , with the energy density U_e determined by $\frac{1}{2} P_r P_m E d P$, where P_m and P_r are the maximum polarization in the charging process and remnant polarization in the discharging process, respectively (fig. S1) (). P_r manifests itself as the P-E hysteresis, which ...
