Air conditioning thermal storage has been shown to be somewhat beneficial in society. Off-peak electricity is cheaper, as demand is lower. It also reduces the demand at peak times, which is often provided by expensive and unenvironmental sources. A new twist on this technology uses ice as a condensing medium for the refrigerant.

The lithium ion battery bank has a nominal energy storage capacity of 1 kWh and the ice storage can store up to 30 kWh latent heat. ... Figure 4 Off-grid Solar Ice storage air conditioner system ...

Thermal Energy Storage (TES) System is a technology which shifts electric load to off-peak hours, which will not only significantly lower energy and demand charges during the air conditioning ...

Our ongoing research is focused on prototype development and experimental evaluation of a 21-kWh TES system integrated with an air conditioner, using multiple modules like the design presented above. This system can shave peak energy demand and improve the demand flexibility in comparison to an air conditioner without thermal storage.

Finally, Monte Carlo simulation method is used to estimate capacity of virtual energy storage of air conditioning group. Applicability of the proposed model is verified with an actual example. Two ...
