Urban Energy Storage and Sector Coupling. Ingo Stadler, Michael Sterner, in Urban Energy Transition (Second Edition), 2018. Electrochemical Storage Systems. In electrochemical energy storage systems such as batteries or accumulators, the energy is stored in chemical form in the electrode materials, or in the case of redox flow batteries, in the charge carriers.

Chemical energy storage systems (CESSs) Chemical energy is put in storage in the chemical connections between atoms and molecules. This energy is released during chemical reactions and the old chemical bonds break and new ones are developed. And therefore the material's composition is changed. Some CESS types are discussed below. 2.5.1.
