In this paper, we present the design and implementation of Green Route (G-Route), an autonomic service routing protocol for constructing energy-efficient provider paths in collaborative cloud architectures. The chief contribution of this work resides in autonomously selecting the optimal set of composite service components sustaining the most efficient energy ...

The second ESA covers 49.5MW/198MWh of energy storage capacity from the Route 66 Energy Storage Project which NextEra is adding to its operational 49.5MW Route 66 Solar facility in New Mexico's Cibola County. NextEra and PNM have an existing PPA for the solar capacity from the project.

The new facilities are expected to bring the total power generated by Amazon solar farms to over 580,000 megawatt hours per year and contributing to Amazon's stated goal to power AWS cloud services solely with sustainable energy. The five new solar projects will double the number of Amazon's ventures in sustainable energy such as solar and ...

In this article we examine four typical technical challenges BESS assets face at the beginning of their lifecycle and how battery analytics can help to overcome them. All are based on real-life BESS projects with sizes between 20MW and 200MWh. Insights are anonymised and modified to respect the confidentiality of ACCURE's customers.

Among different kinds of energy storage methods available, such as pumped-hydro, battery, compressed air, flywheels, capacitor, and others, among those energy storage mechanisms, because of the advantage of clean and efficient hydrogen become an ideal energy carrier (as Table 1 shows). Moreover, it is an abundant source, high density ...
