In this paper, CES in multi-energy systems (ME-CES) is proposed to make use of energy storage not only from electricity storage but also from District Heating System (DHS) and Natural Gas ...

These services can be broadly categorized as: Providing capacity services and energy shifting: System operators must ensure they have an adequate supply of generation capacity to reliably meet demand during the highest-demand periods in a given year. This peak demand is typically met with higher-cost generators which are almost exclusively used to serve peak demand, ...

Energy storage systems can improve the performance of home energy management systems and also provide ancillary services in electricity markets. However, the economic and technical insufficiency of individual home storage units, makes employing them inefficient for domestic storage and market applications, respectively.
