Editor's note: You may have already watched the recent webinar on ultra-capacitors and the role they could play in the energy transition, which Energy-Storage.news hosted with sponsors EIT InnoEnergy, the European Union-backed energy tech innovation accelerator.. In that webinar, market analyst Thomas Horeau of Frost & Sullivan explained that ...

The energy in the supercapacitor is stored in physically separated negative and positive charges. The supercapacitor acts as a buffer when used with a battery. In this way, it protects the battery from high power drain. Supercapacitors have unlimited life cycles, high power density, fast charging time and less equivalent series resistance.
