Battery energy storage system (BESS) is widely used to smooth RES power fluctuations due to its mature technology and relatively low cost. However, the energy flow within a single BESS has been proven to be detrimental, as it increases the required size of the energy storage system and exacerbates battery degradation [3]. The flywheel energy storage system ...

Flywheel Energy Storage System (FESS), as one of the popular ESSs, is a rapid response ESS and among early commercialized technologies to solve many problems in MGs and power systems [12]. This technology, as a clean power resource, has been applied in different applications because of its special characteristics such as high power density, no requirement ...

The core element of a flywheel consists of a rotating mass, typically axisymmetric, which stores rotary kinetic energy E according to (Equation 1) $E = \frac{1}{2} I \omega^2$ [J], where E is the stored kinetic energy, I is the flywheel moment of inertia [kgm^2], and ω is the angular speed [rad/s]. In order to facilitate storage and extraction of electrical energy, the rotor ...
