Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible. Goals that aim for zero emissions are more complex and expensive than net-zero goals that use negative emissions technologies to achieve a reduction of 100%.

Form Energy has been awarded a \$30 million grant from the California Energy Commission to deploy the state's first multi-day energy storage system. Form Energy, a pioneer of iron-air energy storage, is to deploy a 5MW/500MWh system at the site of a Pacific Gas and Electric (PG& E) substation in Mendocino County.

As America moves closer to a clean energy future, energy from intermittent sources like wind and solar must be stored for use when the wind isn't blowing and the sun isn't shining. The Energy Department is working to develop new storage technologies to tackle this challenge -- from supporting research on battery storage at the National Labs, to making investments that take ...
