

Difficulties in the energy storage industry

Intermittent renewable energy is becoming increasingly popular, as storing stationary and mobile energy remains a critical focus of attention. Although electricity cannot be stored on any scale, it can be converted to other kinds of energies that can be stored and then reconverted to electricity on demand. Such energy storage systems can be based on batteries, ...

Reliability. A reliable power system is one in which there is sufficient generation and transmission capacity to meet all grid demand (Finkel 2016). High levels of renewable energy from variable sources like solar and wind can, and have already been achieved in countries such as Denmark, Ireland, Spain and Germany without compromising the reliability of electricity supply ().
