Disc springs support a lot of dynamic processes in a skillful, safe and efficient way - often under extreme force and load conditions. Original SCHNORR®; disc springs excel by: An optionally linear, degressive or progressive course of the load deflection curve. Long service life with dynamic load. Use of high quality materials.

Energy Storage for Safety Systems. Belleville disc springs are used in hydraulic spring mechanisms as an energy storage source as part of Mubea's heavy-duty disc spring stacks. The system pressure compresses the spring stack when the switch is open. If the system should suffer a hydraulic pressure loss, the spring stack unloads, closing the switch.

MASCOT spring energy storage seal ring is a spring driven pressure auxiliary sealing device with PTFE jacket, in which a corrosion-resistant metal energy storage spring is specially equipped. When the MASCOT seal ring is installed in the seal groove, the spring is pressed to make the jacket lip close to the seal groove, thus forming a seal.

where P is the absolute pressure of the gas, V its volume, n the number of moles, R the gas constant, and T the absolute temperature. The value of R is $8.314 \text{ J mol}^{-1} \text{ K}^{-1}$, or $0.082 \text{ l atm K}^{-1} \text{ mol}^{-1}$ using this latter value, the volume of a mole of gas can be readily found to be 22.4 l at 273 K or 0°C . For a constant volume, such as that of a bicycle tire, the pressure is ...
