

This article presents a high-voltage (HV) dual-input buck converter with a bidirectional inductor current (IL) and a fully integrated maximum power point tracking circuit for triboelectric (TE) energy-harvesting applications. The proposed converter regulates HV inputs through a single shared inductor, and HV inputs can be isolated without using an additional HV ...

1 INTRODUCTION. In recent decades, high speed and high quality economic development promotes the rapid growth of energy storage demand. In order to enhance energy security and build ecological civilization, ...

A two-phase interleaved QBC structure is obtained by employing multi-winding CIs instead of discrete inductors as the energy storage magnetic element. The voltage gain is further extended by using (i) voltage lift capacitor, (ii) CIs and (iii) voltage multiplier cells. ... IR25600 dual MOSFET driver provides the required interface between the ...

voltage gain of the switching inductive and capacitive converters can be altered by the number of energy storage devices and diodes, which will unavoidably increase the size and cost of the converter [9, 10]. The circuit discussed in [11] is structured by multi stages of diode-capacitor-inductor units and the voltage gain can be enlarged

A novel magnetically-coupled energy storage inductor boost inverter circuit for renewable energy and the dual-mode control strategy with instantaneous value feedback of output voltage are proposed. In-depth research and analysis on the circuit, control strategy, voltage transmission characteristics, etc., providing the parameter design method ...

The formula for energy storage in an inductor reinforces the relationship between inductance, current, and energy, and makes it quantifiable. Subsequently, this mathematical approach encompasses the core principles of electromagnetism, offering a more in-depth understanding of the process of energy storage and release in an inductor.

A current-fed dual active bridge dc-dc converter using dual transformers is proposed for the energy storage system and electric vehicles, which is suitable to be used in wide input and wide output voltage range bidirectional power flow applications. Optimized switching pattern and the coupling relationship among all the controlled variables have been explored in order to ...

high switching frequencies and high voltage conversion ratios. The significant drawbacks are increased switching losses and reduced efficiencies. In early stage of research on small-scale energy storage systems, coupled inductor played a major role in bidirectional DC-DC converters (BDCs) [1] to improve the overall gain.

The theoretical basis for energy storage in inductors is founded on the principles of electromagnetism, particularly Faraday's law of electromagnetic induction, which states that a changing magnetic field induces an electromotive force (EMF) in a nearby conductor. ... (AC) circuits where the current and voltage are not constant. Additionally ...

DOI: 10.1109/APEC.2017.7931117 Corpus ID: 21875692; A dual coupled inductors-based high step-up/step-down bidirectional dc-dc converter for energy storage system @article{Zhang2017ADC, title={A dual coupled inductors-based high step-up/step-down bidirectional dc-dc converter for energy storage system}, author={Meng Zhang and Yan Xing ...

In this paper, a three-winding-coupled-inductor-based dual active bridge (TWCI DAB) DC-DC converter is proposed. ... Therefore, the proposed topology can adapt to a wide range of energy storage ...

1 INTRODUCTION. In recent decades, high speed and high quality economic development promotes the rapid growth of energy storage demand. In order to enhance energy security and build ecological civilization, China has proposed the ambitious goal of carbon peak by 2030 and carbon neutralization by 2060 [1, 2], This goal will promote the transformation of ...

This paper proposes a three-level bidirectional DC-DC converter with an auxiliary inductor for wide zero-voltage switching (ZVS) in high-output voltage applications. The auxiliary inductor is connected across the middle node of the split flying capacitors and the center tap of the secondary winding in the transformer. The phase-shift angle in three-level stage can facilitate ...

: A novel magnetically-coupled energy storage inductor boost inverter circuit for renewable energy and the dual-mode control strategy with instantaneous value feedback of ...

By selecting the inductor as the intermediate energy storage element, the SOC of the single lithium-ion battery (LIB) cell is calculated by using a particle filter (PF) algorithm.

Current through is the sum of two inductor currents. has a voltage stress of 150 V, while has 70 V and switch has a stress of 200 V. Maximum switch currents of and is 5A while for switch is 10A. ...

A single-inductor dual-input triple-output buck-boost (SIDITOB) converter with a novel clockless shortest power path (CSPP) control strategy is presented, which compares the output voltages with their respective reference voltages to obtain the states of each output. A single-inductor dual-input triple-output buck-boost (SIDITOB) converter with a novel ...

A two-phase interleaved QBC structure is obtained by employing multi-winding CIs instead of discrete inductors as the energy storage magnetic element. The voltage gain is further extended by using (i) voltage lift capacitor, ...

# Dual voltage energy storage inductor

In this paper, a novel high-efficiency bidirectional isolated DC-DC converter that can be applied to an energy storage system for battery charging and discharging is proposed. By integrating a coupled inductor and switched-capacitor voltage doubler, the proposed converter can achieve isolation and bidirectional power flow. The proposed topology comprises five ...

A novel harvesting interface for multiple piezoelectric transducers (PZTs) is proposed for high-voltage energy harvesting. Pre-biasing a PZT prior to its mechanical deformation increases its damping force, resulting in higher energy extraction. Unlike the conventional harvesters where a PZT-generated output is assumed to be continuous ...

Inductors and capacitors are energy storage devices, which means energy can be stored in them. But they cannot generate energy, so these are passive devices. ... However, for the inductor, the voltage is related to the change in the current:  $L \frac{di}{dt} = v_L$ . This relationship holds when the voltage and current are drawn in the passive sign ...

In this paper, a bidirectional non-isolated DC/DC converter for hybrid energy storage systems has been proposed. The converter is constituted by the integration of two ...

This study proposes a two-phase switched-inductor DC-DC converter with a voltage multiplication stage to attain high-voltage gain. The converter is an ideal solution for applications requiring significant voltage gains, such as integrating photovoltaic energy sources to a direct current distribution bus or a microgrid. The structure of the introduced converter is ...

The increasing demand for efficient and sustainable energy systems has spurred significant advancements in power electronics, particularly in the development of DC-DC converters [1,2]. These ...

Three-level dual active bridge with auxiliary inductor for wide zero voltage switching for energy storage system in DC microgrid August 2017 DOI: 10.1109/ICEMS.2017.8056014

For a current-fed dual-active-bridge bidirectional dc-dc converter, an extended duty cycle control is proposed. The low-voltage-side (LVS) bottom switch duty cycle can operate lower than 50%. The conduction loss of switches can be reduced by using low-voltage-rating mosfets for the LVS. Meanwhile, a voltage mismatching control with adaptive clamp voltage ...

The proposed converter can provide a very high step-up voltage gain by utilizing dual coupled inductors and voltage multiplier cells. ... the interleaved energy storage. The voltage stress on the ...

weight, galvanic isolation, high-voltage conversion ratio, and reliability are critical factors, making this design an excellent choice for EV charging stations and energy storage applications. Modularity and symmetrical structure in the DAB allow for stacking converters to achieve high power throughput and
