In addition to the battery size, which is important in optimal hybrid energy storage [98], efficient coordination between the generated power and stored energy to the battery is required. The storage system can be either a single battery [99] or hybrid including supercapacitor (SC)-BESS [100] and BESS-Flywheel [101].

The battery energy storage system's (BESS) essential function is to capture the energy from different sources and store it in rechargeable batteries for later use. Often combined with renewable energy sources to accumulate the renewable energy during an off-peak time and then use the energy when needed at peak time. This helps to reduce costs and establish benefits ...

The battery realizes both energy storage and the production of AIN through sucking up a N₂ feedstock. AIN can be easily further converted to an NH₃-based product, which is essential for the manufacturing of nitrogenous fertilizers and is regarded as an ideal carbon-free energy carrier. In this system, the formation and decomposition of the ...
