Most of us are familiar with electrochemical energy storage in batteries. Energy can also be stored behind hydroelectric dams (mechanical storage) or as chemicals such as ethanol or hydrogen. But it can also be stored as heat. Gabe Murtaugh, director of markets and technology at the Long Duration Energy Storage Council, said the concept is simple:

What is the use of battery storage systems? According to the UK government, battery storage systems could save the UK energy system up to £40 billion (\$48 billion) by 2050, which would ultimately lower consumers' bills of energy. These systems support the integration of additional low-carbon power, heat, and transportation technologies. The ...

Thermal energy storage could connect cheap but intermittent renewable electricity with heat-hungry industrial processes. These systems can transform electricity into heat and then, like typical batteries, store the energy and dispatch it as needed. Rondo Energy is one of the companies working to produce and deploy thermal batteries.
