Energy charged into the battery is added, while energy discharged from the battery is subtracted, to keep a running tally of energy accumulated in the battery, with both adjusted by the single value of measured Efficiency. The maximum amount of energy accumulated in the battery within the analysis period is the Demonstrated Capacity (kWh)

Flexible, scalable design for efficient energy storage. Energy storage is critical to decarbonizing the power system and reducing greenhouse gas emissions. It's also essential to build resilient, reliable, and affordable electricity grids that can handle the variable nature of renewable energy sources like wind and solar.
