Solar flat plate collectors take in solar energy to heat water or other fluids. They have an insulated box with a dark absorber plate under transparent covers. Sunlight warms the absorber plate. This then heats the fluid going through tubes on the plate.

Being one of the major energy consumers, cooking is a necessary part of daily life. Non renewable cooking fuel sources, such as wood or cow dung cause hazardous pollution and a poor ecosystem worldwide. Over the past few decades, solar-powered cooking has undergone numerous improvements. Solar cooking has been predominantly used as a ...

I'm wondering about kinetic energy storage for homes. Imagine a concrete plate resting on hundreds of firmly attached sturdy springs, and a couple of electric winches attached to the top. To store energy, pull up the plate. To release energy, release the plate. Springs store energy with the square of the displacement. What part of this won't work?
