Impedance Spectroscopy: It's a non-intrusive method that uses electrical impedance to measure capacity. It allows to measure the internal resistance, open-circuit voltage, capacity and other characteristics of a battery. Note that, the most common method to measure the capacity of a battery is discharge method, it's widely used in industry ...

The storage capacity of the battery is also expressed in watt hours or Wh. If  $V$  is the battery voltage, then the energy storage capacity of the battery can be  $Ah \cdot V = \text{watt hour}$ . For example, a nominal 12 V, 150 Ah battery has an energy storage capacity of  $(12 \cdot 150)/1000 = 1.8 \text{ kWh}$ .
