

The biogas-fueled SOFC power generation system proposed in this study is composed of four units including a solar thermal energy storage unit (STES), a biogas production and hydrogen generation unit (BPHG), a SOFC-MGT unit, and a waste heat utilization unit (WHU). Fig. 1 depicted the schematic of the proposed hybrid power generation system ...

The calculation example proves that the implementation of energy cascade utilization and demand response management for different users, by integrated energy service providers, can effectively ...

The TES.H is maintained at 259 °C to drive ORC power generation in the working fluid of cyclohexane, and then the ORC outlet fluid with about 130 °C is imported into the TES.L to drive AHP. This configuration enables the efficient energy utilization through a cascade utilization approach. The novelty and contributions of this paper are as follows:

To overcome this challenge, this paper proposes a multi-timescale flexible dispatching method to fully exploit the flexibility of PIES in the energy cascade utilization mode. The cascade utilization model for energy flow is firstly established to analyse the coupling and complementary of heterogeneous energy.

The novel schemes which enabled cascade utilization of cold energy resulted in more than 100% increase in exergy efficiency around 60% increase in thermal efficiency from the conventional Brayton and Rankine cycles. ... Floating storage regasification unit (FSRU) is a novel kind of LNG regasification terminal located in the marine area, which ...

The applications of energy storage systems have been reviewed in the last section of this paper including general applications, energy utility applications, renewable energy utilization, buildings and communities, and transportation. Finally, recent developments in energy storage systems and some associated research avenues have been discussed.

The massive grid integration of renewable energy necessitates frequent and rapid response of hydropower output, which has brought enormous challenges to the hydropower operation and new opportunities for hydropower development. To investigate feasible solutions for complementary systems to cope with the energy transition in the context of the constantly ...

The cascade utilization of retired power batteries in the energy storage system is a key part of realizing the national strategy of "carbon peaking and carbon neutrality" and building a new power system with new energy as the main body []. However, compared with the traditional energy storage system that uses brand-new batteries as energy storage elements, the ...

Cryogenic energy storage (CES) is suitable to utilize the low-temperature range of LNG cold energy in a non-continuous way which can store the cold energy in the off-peak period and release it in the on-peak period

to balance the energy demand [22]. ... In this paper, a novel LNG cold energy cascade utilization system by integrating cryogenic ...

standards, and application scenarios of echelon utilization. The study discusses the battery recycling mode, aging principle, detection, screening, capacity configuration, control principle, battery management system, and other technologies from the aspects of battery recycling and cascade utilization of the energy storage system.

This paper aims at the problem of cold energy utilization of LNG floating storage regasification unit (FSRU). A comprehensive LNG-FSRU cold energy utilization scheme was proposed based on ship-shore sharing. Using energy cascade theory and energy conservation theory to design a cold energy cascade utilization system that includes air separation, dry ice ...

In this paper, we establish energy-hub networks as multi-energy systems and present a relevant model-predictive cascade mitigation control (MPC) scheme within the framework of energy ...

This study explores the influence of cascade utilization and Extended Producer Responsibility (EPR) regulation on the closed-loop supply chain of power batteries. ... in 2022 reached 7.06 million and 6.89 million units, respectively, representing a significant ... paper presents energy storage as a pathway of cascade utilization ...

energy through cascade utilization and coordinated scheduling of various types of energy. Based ... the economy of the system operation and the adjustment strategy of unit operations, which is of ... and the simultaneous optimization of each device and the energy storage device. References [17-20] combine solar energy with CCHP systems to ...

Following the principle of cascade utilization of energy, aiming at LNG cold energy utilization, the cascade utilization mode 4, 5 of high-grade cold energy for power generation and low-grade cold ...

The utilization of multiple phase change materials in an LTES unit, i.e., cascade thermal energy storage (CTES), can improve the process uniformity of the LTES, which further results in the effective utilization of the storage [29]. The CTES reduces the difference in temperature of the HTF and storage medium significantly.

Thermal energy storage (TES) units use different fillers which can be stored at high-temperature within insulated storage tanks. When sunlight is not available, the heat release can then be utilized in CSP plants to meet electrical demands, thereby boosting and improving a plant's dispatchability [2, 3]. As far as tank systems are concerned, the one-tank system with ...

Liquid air has high energy storage density (0.1-0.2 kWh/kg) and is not restricted by region. Its advantages are low unit storage cost and no pollution to the environment, so it can be used for long-term storage []. Since the

liquefied air process consumes a lot of energy, the efficiency of this independent LAES system is relatively low (40-70%) [].

The cascade utilization of retired power batteries in the energy storage system is a key part of realizing the national strategy of "carbon peaking and carbon neutrality" and ...

As exhibited in Fig. 3, single-stage and cascade energy storage processes were analyzed. ... Compared with conventional LHTES units, the unit could increase the utilization of PCMs up to twice as much, and lead to a 99% and 34% reduction of the peak cooling load and peak heating loads, respectively. Through the above analysis, it is evident ...

To address the pivotal issues raised in this study, we constructed three supply chain models: a benchmark model without cascade utilization and an EPR policy, a model wherein a battery manufacturer partners with an energy storage station for cascade utilization, ...

A key component of distributed energy systems (DES) is the placement of small-scale energy generation units close to end use loads [1] S can help avoid electricity transmission losses, enable flexible dispatch of generation technologies and increase system efficiency, as the electricity generated is used locally and the system incorporates a variety of ...

Simulation and optimization of liquefied natural gas cold energy power generation system on floating storage and regasification unit January 2020 Thermal Science 25(00):205-205

Under the guidance of relevant policies, in order to enhance the utilization efficiency of CSES and achieve energy cascade utilization, it is imperative to elevate the technical proficiency of CSES to meet diverse auxiliary service requirements and ensure a supply of energy with varying quality. ... The capacity price of the energy storage unit ...

Firstly, the direct heating or cooling of mechanical energy and cascade conversion and utilization of the thermal energy are ignored or oversimplified, resulting in a weak system integration. Secondly, using storage units to absorb excess energy passively may underestimate MCDES"s operational flexibility.

The development of renewable energy is widely considered as the main way to solve the global energy crisis and environmental pollution problems caused by social development, and many countries have strongly advocated for the development of renewable energy [1], [2].The International Energy Agency predicts that the renewable energy will account ...
