

Surface coating materials offer unique properties for energy-related applications, such as hydrogen production through water splitting and value-added product generation by CO₂ reduction. They also serve as protective layers or surface catalysts to improve the stability, accelerate the surface reaction kinetics and tune the semiconductor ...

As mentioned earlier, surface coating has proven to be effective for improving the rate capability, thermal stability, and capacity retention of cathode materials for energy ...

select article Computation-guided discovery of coating materials to stabilize the interface between lithium garnet solid electrolyte and high-energy cathodes for all-solid-state lithium batteries. ... [Energy Storage Materials, 42 (2021) 22-33, 10.1016/j.ensm.2021.07.010]

This work aims to prepare potential solar thermal energy storage coating using melamine-formaldehyde (MF) microcapsules with an n-Tetracosane (n-Tetra) core as phase change material (PCM). The shell material was prepared by reacting melamine with formaldehyde using a two-step process.

In recent years, a great deal of investigation has been performed for lithium-ion batteries ascribing to their high operating voltage, high energy density, and long cycle life. However, the traditional anode materials suffer from slow kinetics, serious volume expansion, and interface instability during charging and discharging, which encounter tremendous ...

Coating material could also be employed as a buffer substrate to prevent the volume change during charging and discharging, reduce the damage to the structure of the anode materials. ... The energy storage mechanism of these materials is mainly based on the alloying reaction, when fully lithiated can be stored 4.4 mol Li⁺, ...

Wood-based composite phase change materials (PCMs) have considerable development potential in shape-stable thermal energy storage. However, Wood-based composite PCMs possess inflammability due to wood-based supporting materials and organic PCM, which limits its practical application. In this work, a novel strategy of wood-based composite PCMs ...

Organic phase change materials (PCMs) are promising thermal energy storage materials owing to their high energy storage and release capacities, high chemical stability, repeatable utilization ...

Therefore, this review mainly focuses on recent research advances in the field of carbon-coated metal oxides for energy storage, summarizing the advantages and disadvantages of common metal oxides ...

This review elucidates the development of in situ cells and advanced energy materials that are used in energy storage (Li_xFePO₄, Li, NiMnCo and Li_{1.2}Ni_{0.5}Co_{0.1}Mn_{0.55}O₂), energy conversion ...

Recent data indicate that the electrochemical energy performance of graphite is possible to be further improved. Fast charging-discharging of graphite anode could be achieved by building advanced SEIs [32, 33], optimizing microstructure [34, 35] and solvation energy [36]. Very recently, Kaiser and Smet [37] reported a reversible superdense ordering of lithium ...

Enhancing the energy storage properties of dielectric polymer capacitor films through composite materials has gained widespread recognition. Among the various strategies ...

Read the latest articles of Energy Storage Materials at ScienceDirect , Elsevier's leading platform of peer-reviewed scholarly literature. Skip to main content. ... Coordination-induced high-dielectric polymer coatings for high-energy-density lithium batteries. Hai Zhu, Guixiang Zhang, Miao Song, Wenran Wang, ... Weifeng Wei. Article 102968

Energy Storage Materials is an international multidisciplinary journal for communicating scientific and technological advances in the field of materials and their devices for advanced energy storage and relevant energy conversion (such as in metal-O₂ battery). It publishes comprehensive research articles including full papers and short communications, as well as topical feature ...

From mobile devices to the power grid, the needs for high-energy density or high-power density energy storage materials continue to grow. Materials that have at least one dimension on the nanometer scale offer opportunities for enhanced energy storage, although there are also challenges relating to, for example, stability and manufacturing.

Phase change materials (PCMs) have attracted significant attention in thermal management due to their ability to store and release large amounts of heat during phase transitions. However, their widespread application is restricted by leakage issues. Encapsulating PCMs within polymeric microcapsules is a promising strategy to prevent leakage and increase ...

Polymer-based flexible dielectrics have been widely used in capacitor energy storage due to their advantages of ultrahigh power density, flexibility, and scalability. To develop the polymer dielectric films with high-energy storage density has been a hot topic in the domain of dielectric energy storage. In this study, both of electric breakdown strength and energy storage ...

Multifunctional phase change materials-based thermal energy storage technology is an important way to save energy by capturing huge amounts of thermal energy during solar irradiation and releasing it when needed. Herein, superhydrophobic thermal energy storage coating is realized by spraying mesoporous superhydro-

1 · Feature papers represent the most advanced research with significant potential for high impact in the field. A Feature Paper should be a substantial original Article that involves several ...

With the larger amount of heat accumulation on heat energy stored in the PCM cans with and without coating

on the soda cans, the temperatures of water at 24:00 h is recorded as 34 and 32 °C respectively, and it is higher as compared to the conventional SSSS without energy storage (25 °C).

Energy Storage Materials. Volume 39, August 2021, Pages 203-224. ... large coating area, and strong film adhesion. These merits have led to magnetron sputtering being widely applied in the preparation and modification of materials used in lithium batteries. This review provides a systematic summary on magnetron sputtering in terms of lithium ...

Energy Storage Materials, Volume 32, 2020, pp. 377-385. Arne Ronneburg, ..., Sebastian Risse. ... Melamine-formaldehyde microencapsulated n-Tetracosane phase change material for solar thermal energy storage in coating. Solar Energy Materials and Solar Cells, Volume 215, 2020, Article 110676.

Coating Electrode Materials for Next-Generation Energy Storage. Submit to Coatings Review for Coatings Propose a Special Issue ... Integrating intermittent renewable resources such as solar and wind power with energy storage systems (EES) is unarguably beneficial for electricity grid. Although lithium-ion battery with high energy density has ...

Wearable energy storage devices are desirable to boost the rapid development of flexible and stretchable electronics. Two-dimensional (2D) materials, e.g., graphene, transition metal dichalcogenides and oxides, and MXenes, have attracted intensive attention for flexible energy storage applications because of their ultrathin 2D structures, high surface-to-volume ...

A material for energy storage applications should exhibit high energy density, low self-discharge rates, high power density, and high efficiency to enable efficient energy storage and retrieval. ... Limited to certain coating materials, line-of-sight deposition [154] Spray Coating: SiC, AlN: 50-500: Liquid-phase: Simple, scalable: Poor ...

With the purpose of pursuing an even higher energy density for rechargeable batteries, alternative electrode materials with different electrochemical mechanisms other than the intercalation of Li ions have been extensively investigated in recent years [5], [6], [7]. Among them, using elemental sulfur as a cathode material to directly react with lithium metal is especially ...

The development, synthesis, and research of these materials and material-based coatings are key directions in the development of new types of supercapacitors, Li-ion/Na-ion ...

Fullerene-like elastic carbon coatings on silicon nanoparticles by solvent controlled association of natural polyaromatic molecules as high-performance lithium-ion battery anodes Wen Tan a, b, Fan Yang ... W. Tan, F. Yang, T. Yi et al. Energy Storage Materials 45 (2022) 412-421 realize its superior micromechanical properties. However, techniques
