(1) $E_{FW} = \frac{1}{2} J \omega^2$ Where, E_{FW} is the stored energy in the flywheel and J and ω are moment of inertia and angular velocity of rotor, respectively. As it can be seen in (1), in order to increase stored energy of flywheel, two solutions exist: increasing in flywheel speed or its inertia. The moment of the inertia depends on shape and mass of the flywheel. Generally, rotor ...
