Storage Technology Basics A Brief Introduction to Batteries

1. Negative electrode: "The reducing or fuel electrode--which gives up electrons to the external circuit and is oxidized during the electrochemical reaction."
2. Positive electrode: "The oxidizing electrode--which accepts electrons from the external circuit and is reduced during the electrochemical reaction."

The energy storage technologies can be classified based on the method of storage of energy as mechanical, chemical, thermal or electrochemical. Pumped hydro storage (PHS) is the most mature energy storage technologies but is location dependent and hence requires special geographical conditions which are not suitable in our selected location.
