The current environmental problems are becoming more and more serious. In dense urban areas and areas with large populations, exhaust fumes from vehicles have become a major source of air pollution [1].According to a case study in Serbia, as the number of vehicles increased the emission of pollutants in the air increased accordingly, and research on energy ...

The deployment of energy storage technologies is significant to improve the flexibility of power plant-carbon capture systems in different timescales. Three energy storage technologies have been deployed in the CFPP-PCC system, which are battery energy storage, molten-salt heat storage, and lean/rich solvent storage in

carbon capture systems.
