However, the supply and demand of cold energy is limited by time and region. Energy storage technology has been used as an effective method to improve the utilization by maintaining a balance between supply and demand. Cold thermal energy storage (CTES) technology has an important role to play by storing cold and releasing it at a right time [4].

Distributed Energy Resource (DER): Small-scale energy resources, such as rooftop solar photovoltaic (PV) panels and BESS, usually situated near sites of electricity use. Energy Management System (EMS): A system to monitor, control, and optimize DER usage. Energy Storage System (ESS): One or more components assembled or connected to store energy.
