the customer-sited storage target totals 200 megawatts (MW). California has also instituted an incentive program for energy storage projects through its Self-Generation Incentive Program (SGIP) [2]. 2014 incentive rates for advanced energy storage projects were \$1.62/W for systems with up to 1 MW capacity, with declining rates up to 3 MW.

There are many scenarios and profit models for the application of energy storage on the customer side. With the maturity of energy storage technology and the decreasing cost, whether the energy storage on the customer side can achieve profit has become a concern. This paper puts forward an economic analysis method of energy storage which is suitable for peak-valley arbitrage, ...

The heat from solar energy can be stored by sensible energy storage materials (i.e., thermal oil) [87] and thermochemical energy storage materials (i.e.,  $\text{CO}_3\text{O}_4/\text{CoO}$ ) [88] for heating the inlet air of turbines during the discharging cycle of LAES, while the heat from solar energy was directly utilized for heating air in the work of [89].
