China's Energy Storage Market: Still Full of Opportunity. Several policy signals in the past months suggest that the nation's taking a step back from its formerly aggressive decarbonization approach. These signals include the underwhelmed clean-tech targets, with the shelving of the 30GW new energy storage capacity target another example.

Home-energy storage will also reduce the electricity you use from the grid, and cut your bill. If your home is off-grid, it can help to reduce your use of fossil fuel back-up generators. In the near future, time-of-use tariffs will let you store up electricity while it's cheap (overnight, for example) so you can use it during peak times.
