The flywheel energy storage facility is used as a buffer to bridge wind lulls. It is also used to avoid frequently starting and stopping the diesel electricity generator. Because the flywheel energy storage facility's short switching times range in the milliseconds, power fluctuations in the system are effectively eliminated.

1 INTRODUCTION 1.1 Motivation. A good opportunity for the quick development of energy storage is created by the notion of a carbon-neutral aim. To promote the accomplishment of the carbon peak carbon-neutral goal, accelerating the development of a new form of electricity system with a significant portion of renewable energy has emerged as a critical priority.
