

support critical decisions about funding for energy storage projects. This report is also notable for being the first output of a new cooperative relationship between the IEA and the European Patent Office (EPO). The EPO's expertise on patent analysis is world class, and I am delighted that by working together our two organisations

Co-classified patent analysis was used to identify changes in energy storage-ICT patents over the years, shedding light on digitalization trends in the development of smart energy storage systems. Fig. 1 presents the trends of energy storage-ICT patents in China. Patent information before 2000 is not depicted due to the limited number of ...

6. On-site energy storage and hydrogen production to balance power systems and create additional value. There is a growing focus on flexible energy systems to counter the variability of renewable technologies. Patent data in offshore wind energy technologies also show a growing interest in energy storage options,

Additionally, the xls-vba template used for patent analysis is also provided for free use and further development. Both template and crawler can be used with citing this article. ... Patent-based trend analysis for advanced thermal energy storage technologies and their applications. *Int. J. Energy Res.*, 44 (7) (Jun. 2020), pp. 5093-5116, 10. ...

This joint study by the International Energy Agency and European Patent Office underlines the key role that battery innovation is playing in the transition to clean energy ...

This analysis is carried out using patent database search tools IncoPat and Espacenet. Patent documents are retrieved between the time span ranging from 2006 to 2018. ...

The digitalization of low-carbon energy technologies (LCET) provides important technical support for the transition to a greener energy system. Digitalization addresses the phenomenon of the growing application of information and communications technologies (ICT) across the economy, which is regarded as the technology convergence between ICT and other ...

It provides global data and analysis based on the international patent families filed in the field of electricity storage since 2000 (over 65 000 in total). It reveals that between 2005 and 2018, patenting activity in batteries and other electricity storage technologies grew at an average annual rate of 14% worldwide, four times faster than the ...

Fortunately, the innovation of nanomaterials (NMs) and their corresponding processing into devices and electrodes could enhance the functionality and/or advancement of the current ...

# Energy storage patent analysis report template

Our first joint report provides an overview of the innovation landscape in the booming electric storage industry. Specifically, we reveal that patent filings in batteries and electricity storage ...

The report, Innovation in batteries and electricity storage - a global analysis based on patent data, shows that batteries account for nearly 90% of all patenting activity in ...

The data presented in this report show trends in high-value inventions for which patents have been filed in more than one office. 3 Patent information provides robust statistical evidence of technical progress.

and storage resulting from HFTO R& D funding\* o In FY2017 the scope was expanded to include analysis of patent applications resulting from HFTO-funded R& D U.S. Patent data has been tracked from the inception of DOE activities in 1977 U.S. Patent application has been tracked since 2001 (1st year available online)

CAES, a long-duration energy storage technology, is a key technology that can eliminate the intermittence and fluctuation in renewable energy systems used for generating electric power, which is expected to accelerate renewable energy penetration [7], [11], [12], [13], [14].The concept of CAES is derived from the gas-turbine cycle, in which the compressor ...

This patent landscape report seeks to provide a comprehensive overview of available technologies that exclusively use solar energy as the primary energy source for cooking or pasteurizing food. At the same time it identifies systems that are simple and easy to use in environments of rural communities; preferably systems that could be used in ...

o 962 patent awards resulting from FCTO -funded R& D (1977-2018) 497 fuel cell patents (52%) 347 hydrogen production and delivery patents (36%) 118 hydrogen storage patents (12%) 25% of all patents are available for license or licensed 47% are actively being used in R& D o Three types of organizations received patents

The report, Innovation in batteries and electricity storage - a global analysis based on patent data, shows that batteries account for nearly 90% of all patenting activity in the area of electricity storage, and that the rise in innovation is chiefly driven by advances in rechargeable lithium-ion batteries used in consumer electronic devices ...

This analysis is carried out using patent database search tools IncoPat and Espacenet. Patent documents are retrieved between the time span ranging from 2006 to 2018. According to research findings, the number of published patents related to different TES technologies increase every year.

A Sample Financial and Economic Analysis 53 B Case Study of a Wind Power plus Energy Storage System Project in the Republic of Korea 57 C Modeling and Simulation Tools for Analysis of Battery Energy Storage System Projects 60 D ttery Energy Storage System Implementation Examples Ba 61 E ttery Chemistry Ba 70 ...
