The HVAC is an integral part of a battery energy storage system; it regulates the internal environment by moving air between the inside and outside of the system's enclosure. With lithium battery systems maintaining an optimal operating temperature and good air distribution helps prolong the cycle life of the battery system.

3. Energy Storage. Capacitors can also be used for energy storage purposes on circuit boards. In applications such as power supplies, capacitors are employed to store energy during the charging phase and release it during the discharging phase. This helps in smoothing the output voltage and providing a stable power supply to the load.
