Hitachi Energy has successfully passed the world's first and highest voltage short circuit test on a 315 megavolt ampere (MVA), 765 kilovolts (kV) generator step-up transformer (GSU). The generator step-up

transformer (GSU) takes the voltage from the generator voltage level up to the suitable transmission voltage level.

The magical science of power plants. A single large power plant can generate enough electricity (about 2 gigawatts, 2,000 megawatts, or 2,000,000,000 watts) to supply a couple of hundred thousand homes, and that's the same amount of power you could make with about 1000 large wind turbines working flat out. But the splendid science behind this amazing ...

When the energy sent from the power station through the highest or high voltage networks reaches the HV/MV transformer station, the voltage is reduced to a value in the range of 10 kV to 30 kV. At this point, the transformer station plays an important role in ...
