A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed. Several battery ... storage or transmission, increasing conventional generation flexibility, ...

Thus, if the transmission line capacity is consistent with the installed capacity, the utilization rate of the transmission line is very low. Energy storage (ES) can be equipped at the renewable power plant (Tang et al. 2019) to smooth the renewable energy output.
