According to US Department of Energy (DOE), the cost per kilowatt hour electricity from current solar energy technologies is high at approximately \$0.15-\$0.20/kWh ele, if the cost of thermal energy storage is at the level of \$30.00/kWh th. Based on conventional means of electricity generation using fossil fuels, the cost of electricity is \$0.05-\$0.06/kWh.

Where (\overline{C}_p) is the average specific heat of the storage material within the temperature range. Note that constant values of density ρ (kg.m⁻³) are considered for the majority of storage materials applied in buildings. For packed bed or porous medium used for thermal energy storage, however, the porosity of the material should also be taken into account.
