More than a decade ago, the famous California power grid net load "duck curve" led the global energy community to pay attention to energy storage demand, hoping to use energy storage to smooth the duck curve. However, more than a decade later today, the duck curve has intensified into a "canyon curve".

1 INTRODUCTION. In recent years, distributed microgrid technology, including photovoltaic (PV) and wind power, has been developing rapidly [], and due to the strong intermittency and volatility of renewable energy, it is necessary to add an energy storage system to the distributed microgrid to ensure its stable operation [2, 3]. According to the different ...
