

The purpose of Energy Storage Technologies (EST) is to manage energy by minimizing energy waste and improving energy efficiency in various processes [141]. During this process, secondary energy forms such as heat and electricity are stored, leading to a reduction in the consumption of primary energy forms like fossil fuels [ 142 ].

During the time period when the revenue from hydrogen production is lower than the revenue from electricity sales, a hydrogen production station in hot standby mode is more profitable than a station in shutdown mode when the electrolyzer is in hot standby mode.
