It is important to compare the capacity, storage and discharge times, maximum number of cycles, energy density, and efficiency of each type of energy storage system while choosing for implementation of these technologies. SHS and LHS have the lowest energy storage capacities, while PHES has the largest.

How do battery energy storage systems work? Simply put, utility-scale battery storage systems work by storing energy in rechargeable batteries and releasing it into the grid at a later time to deliver electricity or other grid services. Without energy storage, electricity must be produced and consumed at exactly the same time.
