Multi-Product Manifolds. GENERAL VALVE* Twin Seal* positive shut-off, double block-and-bleed plug valve was developed specifically for busy multi-product manifolds. Today, refined products that move through pipeline manifolds are reliably segregated by zero-leakage+ GENERAL VALVE Twin Seal plug valves that have a proven in-field track record.

type of system eliminates valve throttling and enables energy recuperation in overrunning load conditions [1], [2], [3]. Also, systems based on secondary control, using different arrangements of rotary hydraulic machines will eliminate throttling losses and enable both energy recuperation and energy storage [4, 5].

Gaseous hydrogen is liquefied by cooling it to -423°F (-253°C). Liquefied hydrogen is stored in insulated tanks and one of the primary methods for distribution due to energy storage density; however, producing liquefied hydrogen is an energy intensive process. Bray cryogenic valves offer reliable sealing in Hydrogen liquification ...
