As more renewable energy power plants are connected to the electric power grid, energy storage technologies (e.g., batteries, pumped storage) play a more important role in the electricity system as it helps align renewable energy generation produced in off-peak hours with period of higher electricity demand. Generation is often measured in ...

According to statistics, 21 energy storage power stations in Qinghai have been built and connected to the grid by new energy companies. Among them, ten energy storage power stations have joined the ranks of shared energy storage. It is estimated that the annual utilization hours of new energy can be increased by 200 h.

A fundamental point of discussion of economists is the issue of the electricity market design and how to cope with market power. Whether storage operators may exert market power is discussed (e.g., Schill & Kemfert, 2011; Sioshansi et al., 2009). From society's point of view, the economics of social welfare is a very important issue of interest.
