But cold weather doesn't just bring cozy nights--extreme winter cold can damage homes, cause power outages, and threaten lives. Between 1979 and 2016, more than 19,000 Americans have died because of extreme cold. In 2021, a winter storm in Texas knocked out power for nearly 10 million people and caused the deaths of more than 200.

However, in extreme cold area the temperature in winter often falls lower than -20 &#176;C, which is beyond the temperature limit of most commercial LiB. Therefore, possible hybrid design combining with different EES technologies that differ in various temperature range need further research in order to supply economic energy storage solution in ...

A thermal energy storage system (TES) can play a important role in ensuring a stable energy supply during periods of extreme demand, such as during extreme cold snaps. When the demand for energy is low, excess energy can be stored in the form of heat or cold, depending on the season, using a TES system.
