

Prussian blue, which typically has a three-dimensional network of zeolitic feature, draw much attention in recent years. Besides their applications in electrochemical sensors and electrocatalysis, photocatalysis, and electrochromism, Prussian blue and its derivatives are receiving increasing research interest in the field of electrochemical energy storage due to their ...

In this study, the structural properties and hydrogen adsorption energy of the fluorinated metal-organic framework (MOF)-801 were evaluated using density functional theory (DFT).

Energy Storage Materials. Volume 30, September 2020, ... Fluorinated carbon materials possess a wide range of applications and tremendous attractive potential value and have been stepping forward along with the development of organic fluorine chemistry and nanoscience technology. Nowadays, fluorinated carbon materials have been employed in ...

As reflected by computer simulations and experimental results (Fig. 2), in aqueous electrolytes or organic electrolytes, fluorinated carbon materials have a similar charge storage process that more electronegative surface of fluorinated carbon materials is capable of enhancing the interaction between ions in electrolytes and carbon materials ...

Fluorinated polymers, such as PVDF, ETFE, PTFE, etc., are experiencing a surge in demand for designing materials for semiconductor industry and energy storage applications due to their tear ...

Abstract Multifunctional phase change materials-based thermal energy storage technology is an important way to save energy by capturing huge amounts of thermal energy during solar irradiation and releasing it when needed. Herein, superhydrophobic thermal energy storage coating is realized by spraying mesoporous superhydrophobic C@SiO₂-HDTMS ...

Read the latest articles of Energy Storage Materials at ScienceDirect , Elsevier's leading platform of peer-reviewed scholarly literature ... select article Eco-friendly synthesis of vanadium metal-organic frameworks from gasification waste for wearable Zn-ion batteries. ... select article In-situ construction of fluorinated solid ...

Benefiting from the enhancement of interfacial ion transport, the optimized Li₃ GaF₆ achieves the highest record of ionic conductivity (close to 10⁻⁴ S/cm at room ...

Energy Storage Materials. ... 103059. Zwitterion as electrical double layer regulator to in-situ formation of fluorinated interphase towards stable zinc anode. Author links open overlay panel Zhengtai Zha, Tianjiang Sun ... A highly reversible zn anode with intrinsically safe organic electrolyte for long-cycle-life batteries. Adv. Mater., 31 ...

Fluorinated carbon materials (CF_x) have been widely used as cathode materials in primary batteries and simultaneously been applied to modify electrode materials in secondary rechargeable lithium-ion batteries (LIBs) owing to the unique discharge product of LiF and carbon. In this review, we intend to offer a comprehensive connection between the CF_x/Li primary ...

Apart from physical properties, chemical properties of FG have been thoroughly analyzed as one important direction in recent years. [33, 72-83] Although classical organic chemistry generally believes that the C F bond has a large bond energy and thus are chemical inert, the special nature of the C F bond that originates from the 2D structure of this carbon material enhances ...

Aqueous organic redox flow batteries (AORFBs) hold promise for safe, sustainable and cost-effective grid energy storage. However, developing catholyte redox molecules with the desired stability ...

Energy Storage Materials. Volume 53, December 2022, Pages 638-645. Trace amounts of fluorinated surfactant additives enable high performance zinc-ion batteries. Author links open overlay panel Fangjia Zhao a, ... Aqueous zinc-ion batteries are promising alternatives to lithium-ion batteries for grid-scale energy storage. However, the practical ...

Energy Storage Materials. Volume 71, August 2024, 103671. Unveiling the role of fluorinated interface on anionic redox chemistry in Li-rich layered oxide cathode materials towards high-energy Li metal batteries. ... This work was financially supported by the National Natural Science Foundation of China (Grant No. 52274309), ...

Fluorinated covalent organic framework materials for photocatalytically driven benzylamine coupling and azo dyes degradation. ... energy storage [38], [39], and sensing [35], [40], [41]. Benefiting from the feature of extended p-conjugated framework and the resulted conductive columns, the two-dimensional (2D) COFs have served as new platforms ...

Increasing the storage capacity of portable electronic storage devices is one example of how energy storage and conversion have recently emerged as key research subjects for addressing social and environmental concerns. Metal fluoride cathodes have recently received a lot of attention as potential components for high-performance lithium batteries. These ...

Semantic Scholar extracted view of "Toward hydrogen storage material in fluorinated zirconium metal-organic framework (MOF-801): A periodic density functional theory (DFT) study of fluorination and adsorption" by Niko Prasetyo et al. ... fluorinated zirconium metal-organic framework (MOF-801): A periodic density functional theory (DFT) study of ...

Stabilizing Na metal anodes is successfully achieved by using perfluoroalkane sulfonyl fluoride. Mechanism

investigation reveals that constructing the SEI with a fluorinated ...

Fluorinated Materials for Energy Conversion offers advanced information on the application of fluorine chemistry to energy conversion materials for lithium batteries, fuel cells, solar cells and so on. Fluorine compounds and fluorination techniques have recently gained important roles in improving the electrochemical characteristics of such ...

Electrochemical energy storage currently relies on graphite fluoride and on electrolytes comprising [BF₄]⁻ or [PF₆]⁻ anions, and many solid fluorine compounds are ...

Energy Storage Materials. Volume 69, May 2024, 103407. The guarantee of large-scale energy storage: Non-flammable organic liquid electrolytes for high-safety sodium ion batteries. Author links open overlay panel Xiangwu Chang a 1, ... Highly fluorinated or perfluorinated solvents such as 1,1,2,2-tetrafluoroethyl-2,2,3,3-tetrafluoropropyl ether ...

Nanostructured covalent organic frameworks (COFs) have attracted great attentions over the past few decades due to their unique physical and chemical properties. Crystallization is sought in many application fields since it allows enhancing or even promoting properties of catalysis, energy storage and photoelectric properties. However, the ...

Poly(vinylidene fluoride) (PVDF) film shows great potential for applications in the electrostatic energy storage field due to its high dielectric constant and breakdown strength. Polymer film surface engineering technology has aroused much concern in plastic film capacitors as an effective strategy for improving dielectric properties and energy storage characteristics. ...

The review covers various types of organic materials, including organic polymers, small molecules, and organic-inorganic hybrids, that have shown promising performance in energy ...

Energy Storage Materials. Volume 32, November 2020, ... fluorides and fluorinated phosphates and fluorinated phosphazenes. Nonflammable solvents include ionic liquids. ... Addition of appropriate organic solvents to ILs can improve ionic conductivity and adding appropriate SEI formation additives such as VC or lithium difluoro ...

1. Introduction. Energy has become a very urgent problem, and researchers are devoted to develop new energy and energy storage technologies. Among these strategies, latent heat thermal energy storage (LHTES) based on phase change materials (PCMs) has attracted a lot attention owing to its high heat storage capacity [1, 2]. During phase change process, the ...

PDF | On Mar 10, 2023, Jianjun Zhao published Honeycomb-like porous carbon derived from fluorinated magnesium-based metal organic frameworks as an electrode material for supercapacitors | Find ...

In light of the increasingly stringent requirements for the applications of light-weight flexible high-temperature-resistant dielectric materials in the fields of aerospace, electronics, and electric vehicles, the imperative lies in the development of dielectric materials with high discharged energy density, enduring temperature resistance and high reliability. This work ...

Fluorinated electrode materials were investigated very early during the development of Li-based cells (Figure 1) the 1960s, the metal fluorides (e.g., CuF_2 and CoF_3) were first developed as conversion-type cathodes in high-capacity Li-based primary cells toward space applications. ²⁵ Furthermore, Arai et al. reported the first investigation of a low-cost and ...
