The Netherlands has ambitious targets for renewable energy generation, but this will need storage. The flywheels can store energy for a short time, and the batteries for longer, so the hybrid system will have more flexibility. The 11,000 lb (5,000 kg) KINEXT flywheel operates at 92 per cent efficiency, storing energy as rotational mass.

Battery energy storage system (BESS) is widely used to smooth RES power fluctuations due to its mature technology and relatively low cost. However, the energy flow within a single BESS has been proven to be detrimental, as it increases the required size of the energy storage system and exacerbates battery degradation
