Once the demand for electricity power overcome the available energy supply, the stored energy would be release to meet with the energy demand. Mechanical energy storage can be classified into three major types: Compressed air storage, Flywheel Storage and Pumped Storage.

The physics of flywheels. Things moving in a straight line have momentum (a kind of "power" of motion) and kinetic energy (energy of motion) because they have mass (how much "stuff" they contain) and velocity (how fast they're going). In the same way, rotating objects have kinetic energy because they have what's called a moment of inertia (how much "stuff" ...

where P is the absolute pressure of the gas, V its volume, n the number of moles, R the gas constant, and T the absolute temperature. The value of R is $8.314 \text{ J mol}^{-1} \text{ K}^{-1}$, or $0.082 \text{ l atm K}^{-1} \text{ mol}^{-1}$ ing this latter value, the volume of a mole of gas can be readily found to be 22.4 l at 273 K or $0 \text{ }^\circ\text{C}$. For a constant volume, such as that of a bicycle tire, the pressure is ...

Human tissues must be elastic, much like other materials that work under continuous loads without losing functionality. The elasticity of tissues is provided by elastin, a unique protein of the extracellular matrix (ECM) of mammals. Its function is to endow soft tissues with low stiffness, high and fully reversible extensibility, and efficient elastic-energy storage. ...
