Hybrid energy storage is an interesting trend in energy storage technology. In this paper, we propose a hybrid solid gravity energy storage system (HGES), which realizes the complementary advantages of energy-based energy storage (gravity energy storage) and power-based energy storage (e.g., supercapacitor) and has a promising future application.

Furthermore, the use of sand as storage media alleviates any risk for contaminating underground water resources as opposed to an underground pumped hydro storage alternative.
