We can see where costs stand today, but they'll drop as more storage goes onto the grid. Let's start with storage at power plants. As we learned earlier, an electric company may store energy at a power plant to supply power on high-demand days. The plant will need big power all day, and only compressed air and pumped hydroelectric can supply ...

Energy storage is a technology that holds energy at one time so it can be used at another time. Building more energy storage allows renewable energy sources like wind and solar to power more of our electric grid.As the cost of solar and wind power has in many places dropped below fossil fuels, the need for cheap and abundant
