Today's mobile storage options make complete electrification achievable and cost-competitive. Just like electric vehicles, mobile storage is driving the transition beyond diesel dependence and toward emissions-free, ...

It found that the average capital expenditure (capex) required for a 4-hour duration Li-ion battery energy storage system (BESS) was higher at US\$304 per kilowatt-hour than some thermal (US\$232/kWh) and compressed air energy storage (US\$293/kWh) technologies at 8-hour duration.

The cost analysis demonstrated that fuel cell vehicles had the highest cost with consideration of capital cost, operating & maintenance costs, and fuel costs all together in 2016 [61]. This cost analysis compared the mentioned costs for vehicles such as FC-based vehicles, BEVs, PHEVs, HEVs, and Gasoline ICE [61].

1 INTRODUCTION 1.1 Literature review. Large-scale access of distributed energy has brought challenges to active distribution networks. Due to the peak-valley mismatch between distributed power and load, as well as the insufficient line capacity of the distribution network, distributed power sources cannot be fully absorbed, and the wind and PV curtailment ...

Energy storage technologies, store energy either as electricity or heat/cold, so it can be used at a later time. With the growth in electric vehicle sales, battery storage costs have fallen rapidly due to economies of scale and technology improvements. With the falling costs of solar PV and wind power technologies, the focus is increasingly ...

In the high-renewable penetrated power grid, mobile energy-storage systems (MESSs) enhance power grids' security and economic operation by using their flexible spatiotemporal energy scheduling ability. It is a crucial flexible scheduling resource for realizing large-scale renewable energy consumption in the power system. However, the spatiotemporal ...

The use of internal combustion engine (ICE) vehicles has demonstrated critical problems such as climate change, environmental pollution, and increased cost of gas. However, other power sources have been identified as replacement for ICE powered vehicles such as solar and electric powered vehicles for their simplicity and efficiency. Hence, the deployment of Electric vehicles ...
