This is a response to an "Ask Steve" question. Today's question comes from Peter. He asks, how do I make a windmill that uses an alternator to generate electricity? How an Alternator Generates Electricity In 1831-32 Michael Faraday discovered that an electrical current is created by moving a conduit like copper wire through a

I started PureSelfMade in 2013 to develop and spread practical knowledge on homebuilt small wind turbines, independent energy systems, off-grid lifestyle and more. In my hands-on workshop courses I teach simple and effective solutions for those subjects and share my enthusiasm with like-minded people. Read about my background here.

Wind energy integration into power systems presents inherent unpredictability because of the intermittent nature of wind energy. The penetration rate determines how wind energy integration affects system reliability and stability [4]. According to a reliability aspect, at a fairly low penetration rate, net-load variations are equivalent to current load variations [5], and ...

We built a 1000 watt wind turbine to help charge the battery bank that powers our offgrid home. It's a permanent magnet alternator, generating 3 phase ac, rectified to dc, and fed to a charge controller. The magnets spin with the wind, the coils are fixed, so no brushes or slip rings ...

Coping With Intermittent Power. Relying on solar energy and wind power means dealing with natural variability in energy production. But with planning and adaptability, an off-grid home can run smoothly. These tips can help you avoid the no-power situation I ended up in: Monitor battery levels regularly.

Solar panels, a wind turbine, battery storage, charge controller and inverter are the five main parts of a full-featured, off-grid power system. A small system size might not include a wind turbine if local conditions aren't right, but generating power off grid is something that ideally involves these five parts.

These are some old panels, circa 1997. Energy efficiency has improved over time. If you'd like to know how much, check out this graph from the National Renewable Energy Laboratory. Wind Turbine. Our wind power comes from a Bergey XL1 (1kW) wind turbine on an 80-foot guyed tower. The problem is, we hardly ever see wind.
