

How to improve battery energy storage technology

"The report focuses on a persistent problem facing renewable energy: how to store it. Storing fossil fuels like coal or oil until it's time to use them isn't a problem, but storage systems for solar and wind energy are still being developed that would let them be used long after the sun stops shining or the wind stops blowing," says Asher Klein for NBC10 Boston on MITEI's "Future of ...

This value could increase to 40 percent if energy capacity cost of future technologies is reduced to \$1/kWh and to as much as 50 percent for the best combinations of parameters modeled in the space. For purposes of comparison, the current storage energy capacity cost of batteries is around \$200/kWh.
